

Case Study : Distribution/Fulfillment

AUTOSTORE ACHIEVES MAXIMUM EFFICIENCY IN SPACE AND LABOR

Kenco has the agility and flexibility to carry out large-scale projects for our clients, delivering a wide range of solutions that are tailored to each of our customers. Working across multiple industries – from real estate to automation and beyond – our breadth of experience delivers real solutions with real results.

\$9M

IN SAVINGS OVER FIVE YEARS

13,000

FEET IN FREED SPACE

CHALLENGE

With the cost of warehouse space at an all-time high, one of our Fortune 500 partners needed improved storage capacity and density to process a large number of small parts SKUs.

SOLUTION

Kenco proposed our AutoStore Robotic Shuttle System for their distribution center in Chattanooga, TN. With an estimated 18-month payback schedule, our client approved the idea and we successfully implemented the new system. This solution includes PackSize for box-on-demand packaging, Induction Ports, and Picking Ports – all with the aim of achieving maximum efficiency.

RESULTS

With automated packaging and delivery, reduced need for MHE stock, and improved warehouse utilization – freeing up 13,000 square feet – the benefits translate to over \$9 million in savings over the course of five years.
